Topic Description

Specific Challenge:

Despite the general acknowledgement by the scientific community that 'Genetics load the gun but environment pulls the trigger'^[1] when it comes to the causation of major non-communicable diseases (NCDs)^[2], there is persistent uncertainty as to the global burden of disease attributable to environmental (including life-style and climatic) factors, including healthcare costs and negative economic impact. Deciphering the human exposome^[3] is a novel way of addressing the challenge to improve health and reduce the overall burden of disease. This will require improved knowledge of health risks, including combinations of several risk factors, and the mechanisms by which they affect health at different stages throughout the life course, including exposures in foetal life. Effective preventive action will need to be designed, building on knowledge of various risk factors, including exposure to pollutants in daily life, individual behaviour and the social context, taking into account gender issues.

Developing a Human Exposome Project would present a fundamental shift in looking at health, by moving research away from 'one exposure, one disease' understanding to a more complex picture upon which to build solid, cost-effective

Welcome

EURAXESS - Researchers in Motion is a unique pan-European initiative delivering information and support services to professional researchers. Backed by the European Union, member states and associated countries, it supports researcher mobility and career development, while enhancing scientific collaboration between Europe and the world.

EURAXESS is also your gateway to Science4Refugees, a Commission's refugee researchers find suitable jobs in today's challenging

Are you a researcher moving abroad? Here you will find information about many practicalities that may turn up. For personal assistance please contact directly the university or the research institute you are interested in. EURAXESS national portals give useful information about practicalities in other European countries. The European Commission has adopted a European Charter for Researchers and a Code of Conduct for the Recruitment of Researchers...
